Differential Equations and Dynamical Systems (Texts in Applied Mathematics) Lawrence Perko

This textbook presents a systematic study of the qualitative and geometric theory of nonlinear differential equations and dynamical systems. Although the main topic of the book is the local and global behavior of nonlinear systems and their bifurcations, a thorough treatment of linear systems is given at the beginning of the text. All the material necessary for a clear understanding of the qualitative behavior of dynamical systems is contained in this textbook, including an outline of the proof and examples illustrating the proof of the Hartman-Grobman theorem. In addition to minor corrections and updates throughout, this new edition includes materials on higher order Melnikov theory and the bifurcation of limit cycles for planar systems of differential equations.

From reader reviews:

Katherine Belcher:

What do you consider book? It is just for students since they are still students or the item for all people in the world, exactly what the best subject for that? Simply you can be answered for that query above. Every person has various personality and hobby for each and every other. Don't to be obligated someone or something that they don't would like do that. You must know how great and also important the book Differential Equations and Dynamical Systems (Texts in Applied Mathematics). All type of book would you see on many sources. You can look for the internet resources or other social media.

Frank Farrow:

As people who live in typically the modest era should be change about what going on or facts even knowledge to make all of them keep up with the era that is certainly always change and progress. Some of you maybe can update themselves by looking at books. It is a good choice for you personally but the problems coming to an individual is you don't know what one you should start with. This Differential Equations and Dynamical Systems (Texts in Applied Mathematics) is our recommendation so you keep up with the world. Why, since this book serves what you want and wish in this era.

Rosalind Bowlin:

The experience that you get from Differential Equations and Dynamical Systems (Texts in Applied Mathematics) could be the more deep you rooting the information that hide inside words the more you get thinking about reading it. It doesn't mean that this book is hard to comprehend but Differential Equations and Dynamical Systems (Texts in Applied Mathematics) giving you thrill feeling of reading. The article writer conveys their point in specific way that can be understood through anyone who read this because the author of this guide is well-known enough. This specific book also makes your own personal vocabulary increase well. Therefore it is easy to understand then can go along, both in printed or e-book style are available. We highly recommend you for having this Differential Equations and Dynamical Systems (Texts in Applied Mathematics) instantly.

Mary Otter:

You will get this Differential Equations and Dynamical Systems (Texts in Applied Mathematics) by visit the bookstore or Mall. Just simply viewing or reviewing it may to be your solve trouble if you get difficulties for ones knowledge. Kinds of this e-book are various. Not only by simply written or printed but additionally can you enjoy this book by e-book. In the modern era just like now, you just looking from your mobile phone and searching what their problem. Right now, choose your ways to get more information about your publication. It is most important to arrange you to ultimately make your knowledge are still upgrade. Let's try to choose right ways for you.
