**Oral and Maxillofacial Pathology: A Rationale for Diagnosis and Treatment** Robert E. Marx, Diane Stern

This award-winning clinical text covers the vast array of conditions that oral and maxillofacial surgeons need to be prepared to identify and treat, ranging from common reactive disorders to carcinoma to rare salivary gland neoplasms to malignancies of bone. In addition to its clinical presentation, each disease entity includes its pathogenesis, differential diagnosis, diagnostic work-up, histopathology, treatment, and prognosis, offering the reader the complete context necessary for understanding and managing it. This updated two-volume edition includes several new disease entities, the latest information on recognizing and treating previously described conditions, and new clinical images and cases that better portray the clinical presentation and/or treatment of specific diseases. Significant additions include the section on bisphosphonate-induced osteonecrosis of the jaws (BIONJ), which includes over 50 new images and outlines the complete staging and treatment for both oral and intravenous BIONJ, and the incorporation of new reconstructive techniques using recombinant human bone morphogenetic protein, stem cell concentrates, and tissue-engineering principles where appropriate. An essential reference for any oral and maxillofacial surgeon or resident.

## Contents

1. Biopsy Principles and Techniques
2. Inflammatory and Reactive Diseases of the Oral and Maxillofacial Region
3. Infectious Diseases of the Oral and Maxillofacial Region
4. Immune-Based Diseases
